Features:

- Easy integration of VELUX electrical products in your home control system
- Hassle-free product operation
- 10 inputs for individual/group product control
- 5 outputs for feedback option
- Integrated web-tool for customisation of settings

Installation principle:

- Plug in the interface's USB power supply
- Enter the products/groups the interface is to control
- Match control inputs to selected products
- Connect the control signal to the interface input(s)
- Automated control will start working.

The interface's default settings meet the most common application demands. But if individual customisation is required, the on-board web tool allows easy and direct access from your laptop or mobile device.

Connections:
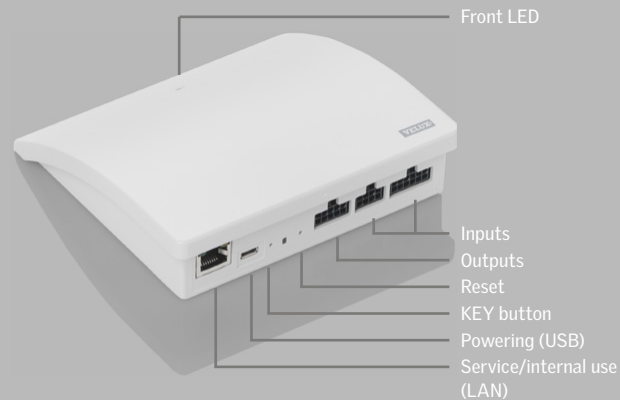

Front LED

Connect VELUX INTEGRA to your home control

# New VELUX KLF 200 home interface

VELUX®

Does your home speak IHC, KNX and LON?

Technology can make your smart home comfortable, healthy and secure.
But there can be many components, from many manufacturers, speaking many different languages – all acting independently.

KLF 200 does the translation for you

Whether your home control system speaks IHC, KNX or LON, the new, wall-mounted VELUX KLF 200 interface will translate the messages from sensors and alarms, activate your VELUX INTEGRA® products accordingly and send 'job done' feedback to the system. The electronic language barrier is broken.
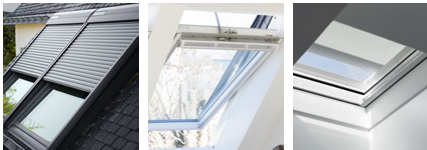

Greater connectivity means more convenience

KLF 200 integrates VELUX INTEGRA® products in KNX system.

Closes VELUX INTEGRA® windows when the alarm system is activated.

You can use standard wall switches in your preferred design for control of INTEGRA® products.

Open and close INTEGRA® windows using a CO_2/ VOC sensor.

Automate operation of VELUX INTEGRA® products by using a weather station.

Use a sun sensor to activate the VELUX INTEGRA® roller shutters.
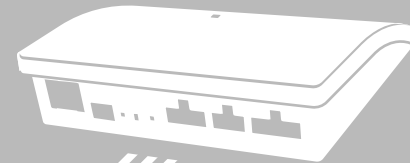

Control input   VELUX home interface   VELUX INTEGRA® products

Control input examples:

Wall switches   Weather station   Alarm system CO_2 sensor   Sun sensor   Key-switch
